

## RETRIEVERS OF HILLSIDE FARMS

American Labrador puppies have been raised on our farm for the past 3 years. These puppies have the genetics to produce both chocolate & yellow coats. They are pet quality pups and representatives of The American Kennel Club (Litter #\*\*\*\*\*). New puppy owners are given free information and invited for return visits to enjoy the farm with puppy and their parents. AKC Puppy Registration Document & Packet provided to new owner.

This AKC Litter from Hill Side Farm Retrievers will be available \_\_\_\_\_  
( \_\_/ \_\_/ \_\_ ) from the mating of a \_\_\_\_\_ female and yellow male DNA  
profile. Our farm is located in Southern Virginia, North Lunenburg County -  
Contact Information: Trey Smith, Owner - Breeder

### Litter Information:

Abby Gail Smith III - Dam (AKC #SR66508602) - Litter # \_\_\_\_\_

Bella Rose - Dam (AKC #SR82189508) - Litter # \_\_\_\_\_

Harley T-Bone Smith - Sire (AKC #SR57131704)

Puppies from litter #SR\_\_\_\_\_; XX - X Chocolate Males; X Chocolate females

Born: \_\_/ \_\_/ \_\_ XX - X Yellow Males; X Yellow females

### Medical Information:

Puppies wormed at 3 weeks - Date: \_\_/ \_\_/ \_\_

Puppies wormed at 5 weeks - Date: \_\_/ \_\_/ \_\_

Puppies wormed at 7 weeks - Date: \_\_/ \_\_/ \_\_

Type of Wormer: Strongid T Susp/ Drontal Plus 136

Shot: Solo-Jec 5 Plus @ 6 weeks Date: \_\_/ \_\_/ \_\_

Recommend: Schedule puppy for a visit to your local veterinarian within 72 hours after pick up.

### Medical Information Cont:

Breeder elected not to have dewclaws removed. Not only is it torture to the 3-day old babies, but there now are studies that indicate that the removal process damages tendons that connect to muscles, resulting in carpal arthritis, improper balance and other soundness issues. Also, the dogs actually use the dewclaws to hold things, and for gripping ground in a fast turn, etc. You just need to keep them clipped if the dog doesn't wear them down.

99% of puppies have intestinal parasites and are easily transferred from mother to pup/ pup to pup. We do not guarantee against them in our puppies - we do guarantee that they will be de-wormed accordingly as listed in medical section of this outline.

**\*Puppies are not certified joint free, but have no history of hip or joint problems\***

### Puppy Feeding & Guidelines:

Weaning implemented at approximately 4 weeks - Purina Puppy Chow Healthy Morsels, blended with blender, softened/ mixed with PetAq PetLac puppy milk supplement/ warm water. Milk was gradually eliminated by 5 weeks and replaced with luke-warm water mixed with puppy chow.

Dry or slightly moistened with warm water puppy food began at 6 weeks until puppies were fed dry food twice daily with plenty of fresh water into the end of the 6th week.

At 7 weeks puppies are released to their new owners. It is **recommended** Purina Puppy Chow Healthy Morsels brand food be transitioned to desired feed of choice after 4 weeks. To start, mix half original brand puppy chow with desired feed of choice twice daily. As puppy transitions, stool may change consistency & color.

Follow feed label directions for amounts to provide puppy as increases in weight and age occur. Refer to labels or Veterinarian for vitamin supplements, etc.

Provide this outline/ medical information to preferred veterinarian for first examination, second shot & de-worming by week 7-8

Regular worming & additional shots will be needed throughout the first year of the pups life.
